

# User Guide: Extension Officer (County Officer)

This guide explains how to use the platform as an **Extension Officer** (County Officer): viewing dashboards, managing farmers and quality standards, location summaries, reports, aggregation centres, and sending advisories.

## 1. Logging in

- 1. Open the platform in your browser and go to **Login**.
- 2. Enter your **phone** (or email) and **password**.
- 3. Click **Sign in**. You are taken to **My Dashboard** (county officer); the sidebar shows the officer menu.

## 2. Main menu and navigation

After login, the sidebar shows:

| Menu item         | Path / Purpose                                          |
|-------------------|---------------------------------------------------------|
| My Dashboard      | Overview of activity and metrics for your area          |
| Farmers           | View and manage farmers in your area                    |
| Quality Standards | Configure and view quality standards (grades, criteria) |
| Location Summary  | Sales and activity summary by location                  |
| Reports           | Generate and view reports                               |
| Centers           | View aggregation centres in your area                   |
| Advisory          | Create and send advisories to farmers (SMS and/or web)  |

Use the **menu icon** on small screens to open or close the sidebar.

## 3. My Dashboard

**Essence:** **My Dashboard** is your **at-a-glance view** of the area you're responsible for: farmer counts, listings, orders, and activity. Use it to see how the region is performing and where to focus extension support.

**Flow:** Open **Dashboard** → **View metrics and cards** → **Use as home view**.

1. Go to **My Dashboard** in the sidebar.
2. You see **summary metrics** for your assigned county/sub-county, for example:
  - Number of **farmers**
  - **Listings** (e.g. active, pending)
  - **Orders** or sales volume
  - **Activity** (e.g. recent sign-ups, orders)
3. Metrics may be shown as cards, numbers, or simple charts. Use this as your **home view** to see how the region is performing. From here you can go to **Farmers**, **Location Summary**, or **Advisory** to drill down or take action.

## 4. Farmers

**Essence:** **Farmers** gives you a **list of farmers** in your area so you can see who is active, who has pending listings, and who may need support. Open a farmer to view profile, listings, and orders—so you can target extension and troubleshoot issues.

**Flow:** Open **Farmers** → **Filter/search** → **Open farmer** → **View profile, listings, orders**.

1. Go to **Farmers** in the sidebar.
2. You see a **list of farmers** (e.g. in your assigned location). The list may show name, phone, location, role, and last activity.
3. Use **filters** (e.g. location, ward, sub-county, role) and **search** (name, phone) if available to find specific farmers.
4. Click a farmer to open their **profile**. You can view:
  - **Profile:** name, phone, email, location (county, sub-county, ward, village), farmer group
  - **Listings:** their produce listings (pending, active, or past)—useful to see who has not yet been approved or who is inactive
  - **Orders:** orders on their listings—to see who is selling and who may need support

5. Use this to **identify** who to support, who has pending listings, or who has not been active. You cannot edit farmer data here (that is done in **Users** by staff); this screen is for **viewing and planning** extension.

## 5. Quality Standards

**Essence:** **Quality Standards** is where you **define or adjust grade criteria** (e.g. Grade A/B/C) used across the platform for listings and orders. Aligning these with county or national guidelines keeps quality consistent and helps farmers and buyers trade on the same basis.

**Flow:** Open **Quality Standards** → **View/edit grade definitions** → **Save**.

1. Go to **Quality Standards** in the sidebar.
2. You see **existing quality standards** (e.g. Grade A, B, C) with their criteria or descriptions. These standards are used when farmers create listings and when buyers order.
3. **View** or **edit** a standard: open it and update the **criteria** or **description** (e.g. size, colour, defects) to match county or national guidelines. Save.
4. If the page allows, **add** new grades or standards. Keep names and criteria clear so farmers and buyers use them consistently.

## 6. Location Summary

**Essence:** **Location Summary** shows **sales and activity by location** (e.g. ward, sub-county). Use it to compare performance across areas, spot gaps, and plan where to run extension activities or advisories.

**Flow:** Open **Location Summary** → **View by ward/sub-county** → **Compare and plan**.

1. Go to **Location Summary** in the sidebar.
2. You see **sales and activity by location**—e.g. by **ward** or **sub-county**. The view may show tables or charts: number of farmers, listings, orders, or volume per area.
3. Use this to **compare** performance across areas: which wards or sub-counties are active, which have few listings or orders. Spot **gaps** and plan where to run extension activities or send **advisories** (e.g. to encourage listing in low-activity areas).
4. Export or print if the page supports it, for reports or planning meetings.

## 7. Reports

**Essence: Reports** let you **generate and view** structured reports (e.g. farmer activity, sales by location, adoption). Use them for planning, reporting to supervisors, and evidence-based decisions.

**Flow: Open Reports → Select report type → Generate or view → Export/print if needed.**

1. Go to **Reports** in the sidebar.
2. You see options to **generate or view** reports. Common types:
  - **Farmer activity** (e.g. registrations, listings per farmer)
  - **Sales by location** (ward, sub-county)
  - **Adoption metrics** (e.g. usage of the platform over time)
3. Select the report type and any **filters** (e.g. date range, location). Generate or view the report.
4. **Export** (e.g. CSV, PDF) or **print** if the page supports it. Use reports for **planning** and **reporting to supervisors**.

## 8. Centers

**Essence: Centers** shows **aggregation centres** in your area—where farmers deliver and where buyers are served. Use it to know the physical network and to direct farmers or advise on collection points.

**Flow: Open Centers → View list of centres → Use for reference when advising farmers.**

1. Go to **Centers** in the sidebar.
2. You see a **list of aggregation centres** in your area. Each may show **name**, **location** (e.g. ward, sub-county), **status** (e.g. operational), and optionally **capacity** or **manager**.
3. Use this to **know where farmers can deliver** and **where buyers are served**. When advising farmers (e.g. in the field or via advisory), you can direct them to the nearest centre or explain collection points. You typically **cannot create or edit** centres here (that is done in **Aggregation Centers** by staff); this screen is for **viewing**.

## 9. Advisory (send advisories to farmers)

**Essence: Advisory** is how you **send messages to farmers** at scale—alerts, tips, or extension content. You choose who receives them (all, by sub-county, farmer group, or individual) and they get the message via **SMS** and **web notification**, so even farmers without the app can be reached.

**Flow: Create advisory** → **Set audience (all / sub-county / farmer group / individual)** → **Enter title and content** → **Send** → **Farmers receive via SMS and/or web.**

1. Go to **Advisory** in the sidebar.
2. You see **past advisories** in a list: title, date sent, **notifications sent** (how many were sent), **SMS delivered** (if DLR is configured), **read** count. Open one to review content and reach.
3. To send a **new advisory**, click **Create** or **Send advisory**.
4. In the form, enter:
  - **Title** (short headline for the message)
  - **Content** (the main message to farmers—keep it clear and concise for SMS length if needed)
  - **Target audience**: choose one of:
    - **All** (all farmers on the platform)
    - **Sub-county** (then enter or select sub-county name)
    - **Farmer group** (then enter or select group code or name)
    - **Individual** (then enter phone or select farmer(s))
  - Optional: **type**, **category**, or **priority** if the form supports them.
5. Click **Send**. The platform sends the advisory via **SMS** (to phones) and **web push** (to users who have allowed notifications). Farmers receive it on their phone and/or in the app; **read** counts may update when they open it.
6. After sending, the new advisory appears in the list with **notifications sent**, **SMS delivered** (if configured), and **read** counts so you can see reach and engagement.

## 10. Notifications and profile

- **Notifications** (bell icon or in-app) may alert you to system updates or important changes in your area. Open them to go to the relevant screen.
- Use **Settings** or **Profile** (if available in the header) to update your details, assigned area, or password.

## 11. Quick reference: key flows

| Goal                    | Steps                                                                       |
|-------------------------|-----------------------------------------------------------------------------|
| See area overview       | My Dashboard → View metrics and cards                                       |
| Support farmers         | Farmers → Filter by location → Open farmer → View profile, listings, orders |
| Set quality rules       | Quality Standards → View/edit grade criteria → Save                         |
| Compare locations       | Location Summary → View by ward/sub-county → Compare and plan               |
| Send message to farmers | Advisory → Create → Set audience and content → Send (SMS + web)             |
| View centres            | Centers → View list of aggregation centres in your area                     |
| Report                  | Reports → Select report type → Generate or view → Export/print if needed    |

For **staff** (users, locations, centres, bulk farmer upload), see [User Guide: Staff](#).
